

Clean Marine was established to provide highly effective but environmentally friendly cleaning solutions for the Marine Industry. All of Clean Marine's products have been designed by our team of chemists with special regard to solving individual cleaning issues that inevitably come with ownership of a Vessel, Home or Business.

Clean Marine's maintenance division is dedicated to the servicing and cleaning of Marine, Household and Industrial Air Conditioning Systems. Our specialty is the complete removal of unpleasant cabin/room odors and the mold and bacteria infested dust that harbors those musty smells deep within the fin coils of the Air Handler unit. Air Handler Coils are proven to be one of the main sources of lingering odors because the constant circulation through the coils and ducting concentrates even a mild external odor such as smoke, cooking smells and fuel fumes. Clean Marine has many studies to support the finding of active Mold Spore growth and harmful Bacteria that thrive within the closed loop of an Air Conditioning System. Allergies, Headaches, Coughing, Fatigue, Flu like Symptoms, Sinus Congestion, Asthma and Irritation of Eyes, Nose & Throat can all be remedied by regular and thorough cleaning of the AC system. Clean Marine also has documented history proving that servicing these areas and other locations on vessels such as refrigeration is the absolute solution to having a clean and pleasant smelling environment. Black and Grey water remediation is also one of our services utilizing a proprietary product called Citrus Float which forms a floating seal between the liquid waste and the breathing vent or drains.

We have many projects completed and referrals to support our efforts. We look forward to you allowing us to demonstrate our Air Conditioning Cleaning Service, at no cost, to prove our process is better than the competition. In fact we are so confident that even if you have just had your Air Handler Cleaned we can show what that 'other company' left behind.
